

→ *CLEAN ROOM SYSTEMS*

→ Competent & Experienced

As clean room systems manufacturer, we offer support in the realization of ideas and projects concerning clean rooms as well as hygienic and low-dust environmental conditions.

We realize projects of varying dimensions, ranging from reconstructions, renovations and constructions, as well as turn-key projects.

Our business segment is the planning and implementation of clean room systems according to hygienic and technological standards in any clean room classifications.

Experience, competence, process-oriented consulting and professional implementation of any services are the basis of our business and your success.

→ Customer-oriented

Our clean room services range from consulting to planning, constructing, production and assembly.

→ Qualified & Certified

Our engineers and staff possess many years of experience in the construction of new buildings as well as existing ones equipped with production environments.

Our company is certified in accordance with the DIN ISO 9001. Regular GMP employees trainings and supplier auditings ensure permanent quality.

- Cosmetics
- Food
- Hospitals
- Precision Engineering
- Microelectronics

All clean room systems and components fulfill current GMP and FDA standards, i.e. the VDI 2083 and DIN EN ISO 14644.

Fully glazed walls, accessible and inaccessible ceiling systems with integrated clean room lighting, various door constructions and wall protection systems are also part of our production and delivery range.

The double-walled systems are available in high-grade steel, lacquered or powder-coated. All elements have a modular structure that allows for integrated solutions ranging from single cabins to complex room systems.
